DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The closest prior art of record i.e. Snitzer et. al. teaches a method of making Bragg gratings in optical fibers (See previous office actions for detailed description of the Snitzer et. al. reference). A declaration under 37 CFR 1.131 was filed by inventor Kenneth Hill on 11/09/2001. The declaration did include a convincing argument that while Snitzer et. al. teaches that the fiber core can be made of silica, **but fails to disclose the use of a silica mask**. All of the remaining claims at issue mentions the silica glass mask feature in making optical fiber Bragg gratings, for example claim1 recites: "A method of fabricating Bragg gratings in the interior of an optical waveguide comprising disposing a **silica glass phase mask** adjacent and parallel to a photosensitive optical waveguide and applying a single collimating light beam through the mask to said optical waveguide as a medium." Also not shown or taught by Snitzer et. al. are the teachings of independent claims 25,26 and 28 which recites Claim 25:" A grating mask comprising a **slab of silica glass having parallel corrugations on a surface thereof forming a surface relief pattern , the pattern containing variations in at least one of pitch and amplitude of the corrugations.**"

Claim 26:" **A grating means comprising a slab of silica glass having parallel corrugations on a surface thereof forming a surface relief pattern, including a special amplitude light filter coated on a surface of the slab opposite to the surface carrying said pattern.**" and Claim 28:" A grating means comprising a slab of

Art Unit: 2883

silica glass having parallel corrugations on a surface thereof forming a surface relief pattern, in which the corrugations are filled with transparent material having an index of refraction different from that of the silica glass.” The limitations of claims 43 and 45 also includes the limitations of **the silica glass phase mask** for forming a Bragg grating in an optical fiber similar to claim 1. Dependent claims 2-24,27,29,44 and 46-54 include the limitations of the independent claims as well as other additional limitations (See the dependent claims for these specific additional limitations.). Thus it can be clearly seen that claims 1-29 and 43-54 are patentably distinguishable over the teachings of Snitzer 321'. The examiner has also taken note of Interference 104331 wherein the present inventors Hill et. al. prevailed in an interference with Snitzer 08/310,426 (now abandoned).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian M. Healy whose telephone number is (571)272-2347. The examiner can normally be reached on Tues-Thurs 6:00AM to 5:00PM.

The substitute oath or declaration, filed March 09, 2007, is acceptable.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank Font can be reached on (571)272-2415. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
